## US 系列音频矩阵处理器 US168/US1616 US SERIES AUDIO MATRIX PROCESSOR

- 采用第四代SHARC ADSP-21489高性能浮点DSP芯片, 强大的音频处理能力。
- 48Khz采样频率保障捕捉声音细节, AD/DA动态范围达114dB
- 内置粉红/白噪声/正弦发生器
- 分频器Bessel/Butterworth/Link-Riley的斜率从6-48dB/Oct范围内可选
- 输入通道功能: 噪声门/16段参量均衡/高低通/压缩器/延时/自动混音
- 输出通道功能: 矩阵混音/16段参量均衡/高低通/限幅器/延时器
- 输入通道支持MIC和线路切换开关, 带48V幻像电源
- 每个输入通道独立的自适应反馈抑制器, 有效解决现场话筒啸叫
- AEC回声消除
- 以太网和232接口, 且开放RS232, TCP/IP协议实现第三方控制
- 有摄像跟踪代码输出, 便于中控实现摄像联动功能
- PC 软件自动发现处理器, 支持32组场景预设, 可透过协议灵活调用

- Using the fourth generation SHARC ADSP-21489 high performance floating-point DSP chip, powerful audio processing capabilities
- The 48 Khz sampling frequency guarantees the capture of sound details with an AD/DA dynamic range of 114 dB
- Built-in pink/white noise/sinusoidal generator
- The slope of the divider Bessel/Butterworth/Link-Riley is optional in the 6-48dB/ OCT range
- Input Channel function: noise gate/16 segment parameter equalization/ high/ low pass/ compressor/ delay/automatic mixing
- Output channel functions: matrix mixer, 16-segment parameter equalization, high-low pass, limiter, delay
- Input Channel support MIC and line switch, with 48V phantom power supply
- Each input channel is independent of the adaptive feedback suppressor, which effectively solves the field microphone howling
- AEC echo cancellation
- Ethernet and 232 interface, and open RS232, TCP/IP protocol to achieve third-party control
- There is video tracking code output, easy to control the realization of video linkage function
- PC software auto-discovery processor, support 32 sets of scene presets, can be flexibly invoked through the protocol
